

TECNOLOGIA

L'area produttiva si avvale di due modernissimi forni di fusione, uno da 110 e l'altro da 60 tonnellate giornaliere (max) di vetro cavato, che alimentano nove linee produttive.

La fabbrica produce 45000 tonnellate di vetro all'anno, distribuite su 130 milioni di pezzi e su 500 differenti forme, utilizzando un unico tipo di vetro, extra-bianco senza piombo, derivato dalla fusione di sabbia silicea con aggiunta di fondenti, decoloranti e affinanti.

Il vetro prodotto risponde completamente alle normative europee ed alle procedure per il rispetto dell'ambiente.

Il vetro utilizzato nel processo produttivo è di tipo extra-bianco (senza piombo), il prodotto viene modellato mediante fasi di pressatura, presso-soffiatura.

PRODOTTI

Gran parte della progettazione e produzione degli articoli di Vetreria di Borgonovo viene concepita ed effettuata tenendo ben presenti le esigenze del canale Ho.Re.Ca. (Hotels, Restaurants & Catering).

Una notevole resistenza, sia meccanica, sia ai molteplici lavaggi, uniti ad una costante ricerca di forme pratiche ed eleganti, sono le peculiarità che contraddistinguono i prodotti Borgonovo.

PRESENTE ED IMMEDIATO FUTURO

Vetreria di Borgonovo continua con la politica degli investimenti e dell'innovazione tecnologica.

Dopo l'ingente sforzo del 2007, quando fu avviata la prima linea per la produzione di vetro soffiato, l'Azienda, preso atto delle tendenze di mercato, ha installato, nel giugno 2010, un'ulteriore linea produttiva dedicata a questa tipologia di articoli.

Questo dovrebbe consentire sia consegne più puntuali degli articoli già esistenti, sia un più rapido sviluppo di nuove linee di articoli. L'obiettivo è quello di offrire una gamma di prodotti sempre più ampia, ad un mercato in espansione, ma anche molto competitivo.

IMPEGNO AMBIENTALE

La Vetreria di Borgonovo è da sempre sensibile alle problematiche ambientali. Seguendo questa linea guida, all'inizio del 2011, l'Azienda ha installato, sui tetti dei propri magazzini, un impianto fotovoltaico per la produzione di energia pulita. Forte di una esposizione di 8000 metri quadri di pannelli solari, questa vera e propria centrale elettrica, della potenza di 966 kW, è in grado di produrre oltre 1,1 GWh/anno, interamente utilizzato per l'attività produttiva.

CERTIFICAZIONE EUROPEA

L'Azienda ha, di recente, ultimato le procedure per la certificazione metrologica dei propri prodotti recanti linea di stazza, secondo la Direttiva 2004/22/CE del Parlamento Europeo e del Consiglio del 31/03/2004 (MID). Può quindi fornire, su richiesta, prodotti conformi a tale direttiva CE.*

TECHNOLOGY

The production area has two very modern kilns. One with a capacity of producing 110 tons of glass per day and the other some 60 tons.

These two kilns feed nine production lines. The factory produces around 45,000 tons of glass per year. This equates to some 130 million pieces per year spread over 500 different shapes and sizes. The entire production is manufactured using one type of glass which is obtained from the fusion of siliceous sand with the addition of fluxes, bleaches and refiners.

The glass produced fully responds to new European laws and to the procedures for the respect of the environment.

The glass is of extra white sodic-calcic type (lead free) and the products are created through phases of pressing and press-blowing.

PRODUCTS

The majority of the production of Vetreria di Borgonovo is conceived and manufactured to meet the requirements of the Ho.Re.Ca. segment.

The main characteristics of Borgonovo products is their strength to withstand daily and constant usage of many months and years and also of course washing cycles.

PRESENT AND IMMEDIATE FUTURE

Vetreria di Borgonovo is continuing with the policy of investments and technological innovation. After the 2007 considerable effort, when the first blown-glass production line was installed, the Company, being aware of the market trends, has acquired, in June 2010, a new one, to implement the same category of items.

This investment should allow the Company both more punctual deliveries of existing items and a quicker development of new lines. The aim is to offer a wider range of articles to an expanding and very competitive segment of glassware market.

ENVIRONMENTAL COMMITMENT

Vetreria di Borgonovo has always been sensitive towards environmental issues. Following this guideline, since the beginning of 2011, the Company has installed on the roof of his warehouses, a photovoltaic plant for the production of clean energy. With a significant exposure of 8000 square meters of solar panels, this is an authentic power station, with the power of 966 kW, and it can produce more than 1,1 GWh per year. The energy produced is totally used for the production process.

EUROPEAN CERTIFICATION

The Company has recently completed the procedures for the metrological certification of its items with gauge level, according to the European Directive 2004/22/CE (MID). Therefore, Borgonovo can supply, on request, products in conformity with this regulation.*

Nuovo marchio Borgoforte

Il nuovo marchio Borgoforte individua quei prodotti, all'interno della gamma Borgonovo, che hanno una particolare resistenza meccanica nei punti solitamente deboli per i prodotti in vetro: bordo bocca, stelo e disco del piede.

Con particolare riferimento ai calici, le valutazioni si basano su parametri oggettivi (es. una resistenza del gambo a 2,6 Joule di forza d'urto) testati sia presso il laboratorio interno delegato al controllo qualità, sia presso laboratori esterni.

Questi risultati sono ottenuti grazie al nostro particolare processo produttivo, che prevede la formatura dell'intero calice senza che vi sia soluzione di continuità tra parison, stelo e disco del piede.

In questo modo si ottiene un prodotto monolitico, privo di punti critici ove si concentra la tensione. Di conseguenza, a parità di energia applicata, i nostri calici resistono maggiormente ad urti e sollecitazioni sul bordo bocca e sul piede.

Prove condotte alla Stazione Sperimentale del Vetro di Murano, con l'ausilio di particolari attrezzature e specifici modelli matematici, hanno dimostrato che, la frequenza di rotture dei nostri calici è inferiore di circa il 30% rispetto al prodotto ottenuto con tecniche tradizionali.

In base a queste caratteristiche, i prodotti Borgoforte si propongono, quindi, agli operatori del settore Hospitality, come strumento di lavoro pratico, affidabile e di lunga durata.

New brand Borgoforte

The new brand Borgoforte identifies those products, within the Borgonovo range, characterized by a particular mechanical resistance in the glassware's usual weak positions: rim, stem and foot disc.

Referring to the goblets, the evaluations are based on objective bench marks (i.e. the stem is laboratory tested to withstand pressure up to 2,6 joule). The products are tested both at the internal Quality Control Laboratory and at external laboratories.

These results are achieved through our manufacturing process by producing the complete goblet in one forming process only.

In this way, we obtain a monolithic product, without critical positions where the glass stresses are usually located. Consequently, our stemware resists more to shocks and stresses both on the rim and on the foot.

The Glass Experimental Laboratory in Murano, has been commissioned by us, for a huge range of tests. Using proper toolings and mathematical models, those tests have demonstrated that the frequency of breakages in our stemware is 30% less than in the products manufactured with the traditional forming process.

Basing on all these arguments, the Borgoforte products offer themselves to the operators of the Hospitality sector, as practical, reliable and long-lasting work tools.

Nouvelle marque Borgoforte

La nouvelle marque Borgoforte comprend les produits, parmi la gamme Borgonovo, ayant une spéciale endurance mécanique aux points où les produits en verre sont normalement faibles: bord de la bouche, pied et disque du pied.

Pour ce qui concerne les verres à pied, nos évaluations se fondent sur des données objectives (ex. un' endurance sur le pied à 2,6 Joule de force d'impact) essayées chez notre atelier préposé au contrôle de la qualité et chez laboratoires extérieurs.

Ces résultats ont été donnés grâce à notre spécial procédé de production avec la fabrication de tout le pied sans aucune interruption entre parison, pied et disque du pied.

De cette façon, on a un produit monolithique, sans points critiques où se concentre la tension. Par conséquent, avec la même application d'énergie, nos verres à pied résistent le plus aux impact et sollicitations sur le bord de la bouche et sur le pied. Des essais effectués par la Station Expérimental du Verre de Murano (Venise) avec spéciaux équipements et particuliers modèles mathématiques ont prouvé que la fréquence de bris de nos verres à pied est inférieure d'environ le 30% en comparaison aux produits fabriqués avec les méthodes traditionnels.

C'est donc grâce à ces caractéristiques que les produits Borgoforte se offrent aux opérateurs du secteur Hospitality comme instrument de travail pratique, fiable et de longue durée.

Nueva marca Borgoforte

La nueva marca Borgoforte define aquellos productos, dentro de la gama Borgonovo, que tienen particular resistencia mecánica en los puntos normalmente débiles para los productos de vidrio: borde, tallo y base.

Sobre todo en lo que se refiere a la copa, las consideraciones se basan en parámetros objetivos (p.e. una resistencia en la base de 2,6 joule de fuerza de impacto) experimentados tanto en nuestro laboratorio interno encargado del control de calidad como en laboratorios externos.

Estos resultados se obtienen gracias a nuestro propio proceso de producción, que prevé el modelado de la copa entera sin solución de continuidad entre cáliz, pie y base.

Así se obtiene un producto monolítico, sin puntos críticos donde se concentra la tensión. De tal manera, aplicando la misma energía, nuestras copas resisten más a golpes y esfuerzos en el borde y en la base.

Pruebas realizadas en la Estación Experimental del Vidrio de Murano, con la ayuda de particulares instrumentos y específicos modelos matemáticos, han demostrado que la frecuencia de roturas de nuestras copas es inferior en un 30% aprox. con respecto al producto obtenido a través de técnica tradicional.

Por todo ello, proponemos los productos Borgoforte a los operadores del sector Hostelería, como herramienta de trabajo práctica, segura y de larga duración.

Der neue Markenname Borgoforte

Der neue Markenname BORGOFORTE identifiziert Produkte innerhalb des kompletten Lieferprogramms von Borgonovo, die einen besonders hohen mechanischen Widerstand in den empfindlichen Punkten bei Glasprodukten haben: Mundrand, Stiel und Bodenplatte. Besonders bei Kelchgläsern basieren die Bewertungen auf besonders objektive Parameter; (ein Schlagwiderstand im Stiel von 2,6 Joule) getestet vom eigenen internen Prüflabor unserer Qualitätsabteilung als auch von freien unabhängigen Prüfstellen. Die Ergebnisse werden Dank eines speziellen Produktionsprozesses erreicht, welcher die Herstellung dieser Kelche aus einem Stück vorsieht. Kelch, Stiel und Bodenplatte sind nahtlos verbunden. Somit bekommt man ein einteiliges Produkt, ohne kritische Punkte an denen Spannungen auftreten. Die Konsequenz daraus ist, das bei gleicher aufgewendeter Energie, unsere Kelche widerstandsfähiger gegen Stöße, Belastungen am Mundrand und im Bereich der Bodenplatte sind. Im Forschungslabor der Glashütte von Murano durchgeführte Tests, mit Hilfe besonderer Einrichtungen uns spezifischen mathematischen Modellen, haben demonstriert dass die Häufigkeit von Brüchen an unseren Kelchgläser circa 30% niedriger ist als an vergleichbaren, traditionell hergestellten Produkten. Aufgrund dieser charakteristischen Eigenschaften der Produkte „BORGOFORTE“ bieten sie sich besonders bei Anwendern im Bereich der Gastronomie als praktisches, zuverlässiges und langlebiges Arbeitsinstrument an.

Новый бренд Borgoforte

Новый бренд Borgoforte индивидуализируется и входит в гамму продуктов, которые производит Vetriera di Borgonovo, характеризующаясь той высокой механической сопротивляемостью и устойчивостью, которое обычно сопровождает производство бокалов на ножке, т.е. – края рюмок и бокалов, а самое главное – соединения ножки и «чашки».

С определённым сравнением по производству бокалов, наши оценки основываются на объективных параметрах (например: сопротивление ножки до 2,6 Joule от силы столкновения) протестированных как и в наших лабораториях, так и в специализированных лабораторией по качеству выпускаемой продукции. Эти результаты получены благодаря нашему определённому производственному процессу, который предвидит формовку всего бокала на ножке единой монолитной структурой: ножка и «чашка» выдуваются единым цельковым блоком, что существенно повышает прочность изделия. А особый способ термической обработки края рюмок и бокалов создаёт так называемое «кольцо безопасности». Итак, данным способом мы получаем монолитный бокал, лишенный критических точек, где обычно концентрируется напряжение и как следствие, в равенстве прикладной энергии, наши бокалы получают максимально стойкими к ударным и термическим нагрузкам.

Испытания, которые были сделаны в специализированной лаборатории – Экспериментальная Станция по стеклу Murano, с помощью определённого оборудования и специфических математических моделей, доказали, что частота боя бокалов значительно низкая, примерно на

30% меньше по отношению к продукту, полученному при производстве традиционным методом.

На основе этих характеристик, изделия под новым брендом Borgoforte предлагаются таким образом операторам сектора Hospitality – Hoteca, как инструмент практической, надёжной и длительной работы.
